

# TELEPRACTICE ASSESSMENT FOR APHASIA

## Who is doing the research?

PhD candidate Selina Teti and Principal Investigator Dr. Laura Murray.

We are examining a screening protocol that could be done via telepractice services for individuals with post-stroke aphasia that includes both an aphasia and cognitive screening test.

## Who can participate?

Individuals must have the following characteristics:

- English as first language
- At least 30 years of age
- Suffered stroke six months prior (with or without aphasia)
- Access to internet and computer/tablet
- Access to a care partner

## What will be required?

- Participants will be scheduled for 2 telepractice sessions
- The total administration time will take approximately 1-1.5 hours for each telepractice session
